Art Unit: 2154

Art Rejections:

1. The text of 35 USC 103(a) not cited here can be found in the previous office action.

2. Claims 1, 6-11, 16-21, 26-31 and 36-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bhatia et al, U.S. pat. Appl. Pub. No. 2002/0037744, in view of Bressler, U.S. pat. No. 6,584,190.

Per claims 1 and 10, <u>Bhatia</u> discloses a system and method for providing service access to a wireless network comprising:

- a) generating at a client application a request for a network session (see Bhatia in page 8, par. 99),
- b) determining allowability of the session based on a service agreement stored in a local database (645) without accessing external resources (see Bhatia in page 9, par. 107).

Bhatia also teaches monitoring and/or querying mobile client location via many conventional communication channels including out-of-band communication channels (see Bhatia in page 9, par. 103).

Bhatia does not explicitly teach using out-of-band signaling in determining if the session request is allowed. The use of out-of-band signaling to set up a call session or roaming

Art Unit: 2154

is well known in the art as disclosed by <u>Bressler</u> (see <u>Bressler</u> in col 1, lines 21-24).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize such out-of-band signaling in <u>Bhatia</u> because it would have enabled the system to setup a communication session with the mobile client when the mobile client travels outside its home area (<u>see Bhatia in page 9, par. 103, 106</u>).

Per claims 6-9, it is noted that the use of handshaking/ negotiation signals including discovery and advertisement messages in wireless communications is well known in the art.

Claims 11, 16-21, 26-31 and 36-40 are similar in scope as that of claims 1 and 6-10.

2. Claims 2-4, 12-14, 22-24, 32-34, 41-46, 48-54, 56-62 and 64 are rejected under 35 U.S.C. 103(a) as being unpatentable over <a href="https://doi.org/10.508/being-new-material-being-n

Per claims 2-4, Bhatia does not explicitly storing/maintaining session information at telecommunication gateway. Griffith teaches storing/saving a data session established between a mobile device and information provider, e.g., web server, at a gateway or access point to enable a

Art Unit: 2154

seamless reconnection of communications and retransmission of data to the mobile device without requiring the mobile device to re-login or create a new session with the server (see Griffith's page 2, par. 27 and page 6, par. 74-75).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Bhatia with Griffith's teachings because it would have enabled reducing setup time in providing access to the mobile client especially when the mobile device travels across different networks (see Griffith's page 2, par. 29).

Claims 12-14, 22-24 and 32-34 are similar in scope as that of claims 2-4 and hence are rejected for the same rationale set forth above for claims 2-4.

Per claims 41-46, 48-54, 56-62 and 64, it would have been obvious to one of ordinary skill in the art to utilize out-of-band signaling for communication between the mobile client with a foreign agent because it would have enabled the system to setup a communication session with the mobile client when the mobile client travels outside its home area (see Bhatia in page 9, par. 103, 106).

Allowable Subject Matter:

3. Claims 47, 55, and 63 are allowed over prior art of record.

Art Unit: 2154

Response to Arguments:

4. Applicant's arguments filed 5/5/04 are moot in view of new grounds of rejection set forth above.

Applicant alleges that neither <u>Bhatia</u> nor <u>Griffith</u> teach or suggest using out-of-band signaling.

It is submitted that the newly applied art, <u>Bressler</u>, clearly shows that the use of out-of-band signaling to enable quicker setup of a call session or phone roaming is in fact well known in the art as discussed above.

Conclusion:

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Viet Vu whose telephone number is 571-272-3977. The examiner can normally be reached on Monday through Thursday from 8:00am to 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Follansbee, can be reached on 571-272-3964.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.

Art Unit: 2154

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
